#### DETAILED ACTION

### Continued Examination Under 37 CFR 1.114

 A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under Ex Parte Quayle, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.
 Applicant's submission filed on 02/16/2010 has been entered.

# Information Disclosure Statement

The information disclosure statement (IDS) submitted on 02/16/2010 is being considered by the examiner.

## Allowable Subject Matter

- Claims 1-10, 12-21 are allowed.
- The following is an examiner's statement of reasons for allowance:

Claims 1 and their dependents thereof, are allowed because the closes prior art,

McConnell (US Patent No. 6961019), Richards et al. (US 2002/0061080), Thomas (US Patent

No. 7010270), and Suzuki (US 2003/0063597), either alone or in combination, fails to anticipate
or render obvious an apparatus comprising: a processor configured to detect presence of
interfering signals in a second frequency band, wherein said second frequency band is used by a
receiver to receive signals via a radio interface, and wherein said receiver is combined in a single
device with a communication system transceiver exchanging sisals via a radio interface in a first
frequency band, and to determine a timing pattern for detected interfering signals based on a

timing information provided by said communication system transceiver, which timing information is indicative of timing for transmissions employed by said communication system transceiver; and a processor configured to cause a manipulation of signals reaching said receiver during time intervals defined by a determined timing pattern, in order to reduce a performance degradation due to interfering signals originating from a transmitter external to said device, which transmitter employs a same timing for transmissions as said communication system transceiver of said device.

Specifically, McConnell, Richards, Thomas, and Suzuki, either alone or in combination, fails to teach "determine a timing pattern for detected interfering signals based on a timing information provided by communication system transceiver, which timing information is indicative of timing for transmissions employed by said communication system transceiver" and "interfering signals originating from a transmitter external to said device, which transmitter employs a same timing for transmissions as said communication system transceiver of said device".

Claims 12 and their dependents thereof, are allowed because the closes prior art,

a radio interface, and wherein said receiver is combined in a single device with a communication
system transceiver exchanging signals via a radio interface in a first frequency band; determining

of timing for transmissions employed by said communication system transceiver; and manipulating signals reaching said receiver during time intervals defined by said timing pattern, in order to reduce a performance degradation due to interfering signals originating from a transmitter external to said device, which transmitter employs a same timing for transmissions as said communication system transceiver of said device.

Specifically, McConnell, Richards, Thomas, and Suzuki, either alone or in combination, fails to teach "determining a timing pattern for detected interfering signals based on a timing information which is indicative of timing for transmissions employed by said communication system transceiver; and manipulating signals reaching said receiver during time intervals defined by said timing pattern, in order to reduce a performance degradation due to interfering signals originating from a transmitter external to said device, which transmitter employs a same timing for transmissions as said communication system transceiver of said device".

Claims 21 is allowed because the closes prior art, McConnell (US Patent No. 6961019), Richards et al. (US 2002/0061080), Thomas (US Patent No. 7010270), and Suzuki (US 2003/0063597), either alone or in combination, fails to anticipate or render obvious an apparatus comprising: means for detecting presence of interfering signals in a second frequency band, wherein said second frequency band is used by a receiver to receive signals via a radio interface, and wherein said receiver is combined in a single device with a communication system transceiver exchanging signals via a radio interface in a first frequency band; means for determining a timing pattern for detected interfering signals based on a timing information which is indicative of timing for transmissions employed by said communication system transceiver; and means for manipulating signals reaching said receiver during time intervals defined by said
